## 1.0 INTRODUCTION

KOMAN Government Solutions, LLC (KGS) has prepared this Quarterly Operations Report for the GM-38 Area Groundwater Treatment Plant (GWTP) at the Naval Weapons Industrial Reserve Plant (NWIRP) in Bethpage, New York. This report has been prepared for the U.S. Department of the Navy (Navy), Naval Facilities Engineering Command (NAVFAC), Mid-Atlantic, under Contract No. N40085-16-D-2288, Contract Task Order No. 0005. This First Quarter 2019 Operations Report details activities that occurred from January to March 2019. Data was collected and operational activities were performed by KGS in accordance with the following documents:

- *Final Operation, Maintenance & Monitoring Plan for Groundwater Treatment Plant GM-38 Area Groundwater Remediation, Naval Weapons Industrial Reserve Plant, Bethpage, New York* prepared by Tetra Tech EC, Inc. (TtEC) in 2010, hereafter referred to as the “O&M Manual.”
- *Final Sampling and Analysis Plan (Field Sampling Plan and Quality Assurance Project Plan), UFP-SAP for Operations, Maintenance, and Monitoring of the Groundwater Treatment Plant, GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, New York* prepared by TtEC in 2010.

### 1.1 Background

NWIRP Bethpage is located in east central Nassau County, Long Island, New York, approximately 30 miles east of New York City (**Figure 1**) and is currently listed by New York State Department of Environmental Conservation (NYSDEC) as an “inactive hazardous waste site” (#1-30-003B). In the late 1990s, the Navy's property totaled approximately 109.5 acres and was a Government Owned Contractor-Operated (GOCO) facility that was operated by Northrop Grumman (NG) until September 1998. NWIRP Bethpage was bordered on the north, west, and south by property owned, or formerly owned, by NG that covered approximately 550 acres, and on the east by a residential neighborhood.

The GM-38 Area refers to a cluster of monitoring wells installed in the 1990s by NG. The GM-38 Area is approximately 8,500 feet south, southeast and hydraulically downgradient of NWIRP Bethpage. The GWTP is located within a utility easement with a street address of 100 Broadway, Bethpage, NY.

The “hot spot” cleanup remedy for the GM-38 Area groundwater was originally set forth in Record of Decision (ROD) documents for Operable Unit 2 (OU 2) Groundwater for the NG and NWIRP Sites (New York State Registry Site Numbers 1-30-003A & 1-30-003B, respectively) issued by NYSDEC Division of Environmental Remediation in March 2001 and for the NWIRP Bethpage Site by NAVFAC in April 2003 (Revision 1). The selected remedy was chosen in accordance with the New York State Environmental Conservation Law (ECL) and the Navy’s Installation Restoration Program (IRP). It is also consistent with the Comprehensive Environmental Response Compensation and Liability Act (CERCLA), as amended, 42 U.S.C. §§ 9601-9675.

## 1.2 GWTP Overview

Currently, groundwater is extracted from recovery wells RW-1 and RW-3 (pumping at RW-3 was suspended from July 2015 to June 2018 as described below) and treated in the GWTP. The treatment process consists of flow equalization, air stripping and vapor-phase carbon treatment, bag filtration, and liquid-phase carbon treatment. Though the GWTP was originally equipped with a pH adjustment system utilizing sodium hydroxide, it has since been determined that pH adjustment is not necessary, and the equipment has been taken off-line and sodium hydroxide sent off site for beneficial reuse. A process flow diagram is presented as **Figure 2**. The treated water is either re-injected into injection well IW-1 or discharged into the Nassau County Recharge Basin #495. Under CERCLA, the Navy is required to meet the effluent requirement in the NYSDEC's Storm Pollution Discharge Elimination System (SPDES) Equivalent Application as an Applicable or Relevant and Appropriate Requirement (ARAR).

The GWTP was designed to operate at an average flow rate of 1,100 gallons per minute (gpm) (800 gpm from RW-1 and 300 gpm from RW-3), as measured by the average discharge flow rate. It was determined that this flow rate would be necessary to effectively contain the higher concentration of contamination in the GM-38 Area groundwater. Volatile Organic Compounds (VOCs) in the influent groundwater consist of trichloroethene (TCE), tetrachloroethene (PCE), vinyl chloride (VC), cis-1,2-dichloroethene (cis-1,2-DCE), 1,2-dichloroethane (1,2-DCA), benzene, toluene, and total xylenes.

The air stripper (AS) is a structural aluminum tower that is packed with 3.5-inch diameter polypropylene Jaeger Tripack. Groundwater is pumped to the air stripper distribution port and sprayed over the column of Jaeger Tripack at a flow rate of approximately 1,100 gpm. Previously, 100 gpm of recirculated water was also rerouted through the AS, but as of October 2010, recirculation was no longer deemed necessary to the operation of the system. An induced draft countercurrent flow of air enters the air stripper below the base of the packing material at a rate of 8,000 standard cubic feet per minute (scfm). The large surface area of the packing material allows for a mass transfer of the VOCs from the groundwater into the air stream. The VOCs in the off-gas, except for VC, are removed via two 20,000-pound (lb) vapor phase granular activated carbon (VGAC) units (VGAC-1 and VGAC-2). VC is oxidized by a 20,000-lb vessel containing zeolite impregnated with potassium permanganate (VGAC-3) into potassium chloride and carbon dioxide. The potassium chloride remains in the pore structure of the zeolite substrate. The treated off-gas is discharged from the stack.

Water treated by the air stripper is subsequently processed through three 8,000-lb liquid phase granular activated carbon (LGAC) units in parallel prior to discharge in the recovery basin (or injection well, if necessary).

The GWTP is controlled by a programmable logic controller (PLC)-based digital and analog control system, with instrumentation that monitors pH, pressure, tank level, flow and differential pressure transmitters, water level in recovery wells, and motor operational status. The information in the PLC is made available to an operator via a human-machine interface (HMI) program. By using this program, the status of the GWTP can be displayed in real time and adjusted, if necessary, by the operator.

A 2014 evaluation of the GM-38 Area, conducted in order to better determine the capture zone of the recovery wells, recommended that use of recovery well RW-3 be discontinued (*Capture Zone Evaluation and Path Forward, GM-38 Area Groundwater Treatment Plant* [Tetra Tech 2014]). The report was sent to NYSDEC in March 2014 and recommended ceasing operation of recovery well RW-3 and increasing the pumping rate of recovery well RW-1. These system modifications would maintain the existing GWTP pumping rate of 1,000 to 1,100 gpm while maintaining the desired capture zone of the GWTP (Tetra Tech 2014). NYSDEC concurred with the implementation of this path forward and associated system modifications on 20 April 2015. On 1 July 2015, in accordance with the approved path forward, recovery well RW-3 was taken off-line. The flowrate of recovery well RW-1 was increased from approximately 800 gpm to approximately 1,000 gpm. Pumping at RW-3 was once again resumed in June 2018 to address persisting VOC concentrations at this well. Pumping rates were adjusted so that approximately 80% of the total groundwater extracted is from RW-1 with the remaining 20% extracted from RW-3.

## **2.0 GWTP OPERATIONS AND MAINTENANCE**

While designed to run completely automated, the GWTP requires regular visits by an operator to record and adjust operational parameters and to perform scheduled maintenance. The GWTP is equipped with telemetry that will alert an on-call operator in the event of a plant shutdown.

### **2.1 Routine Maintenance Activities**

Routine maintenance activities at the GWTP were performed during the operator's visits. These activities include general site inspections, collection of operational data (water and vapor flowrates, differential pressures across the AS, carbon units, bag filter units and blower discharge pressures, tank levels and totalizer readings), measurement of water levels in the recovery wells, adjustment of pump signal settings, collection of vapor and process water samples, changing out of bag filters, switching of lead/lag pump assignments, and preventive maintenance of system equipment.

In addition, the following maintenance tasks were also performed during the First Quarter:

- On 5 February, the annual backflow preventer inspection was performed. Results were submitted to the Bethpage Water District and the New York State Department of Health (NYSDOH), as required.
- On 11 February, the operator backwashed the GAC vessels.

### **2.2 Non-routine Maintenance / Site Activities**

The following non-routine activities occurred during the First Quarter:

- On 8 January, KGS staffs attended an onsite training of the upgraded SCADA system and remote access.
- On 18 January, the Advanced Oxidation Process (AOP) experimental treatment unit for 1,4-dioxane was delivered on site and installation was subsequently completed by others.

### 3.0 GWTP MONITORING

The intent of the GWTP is to remove contaminant mass and reduce elevated VOC levels to levels similar to those in the surrounding aquifer. It is anticipated that GWTP operation will minimize contaminant impacts on water supply wells and currently unaffected portions of the groundwater aquifer. The GWTP is not intended to remediate groundwater contamination in the local aquifer to non-detectable levels (TtEC 2010). Various process samples (water and vapor) are collected on a monthly basis to monitor GWTP efficiency and to ensure compliance with Federal and State effluent discharge and air emission requirements. In addition, groundwater samples are collected semi-annually to monitor water quality and determine the effectiveness of the remediation activities and monitor the hydraulic containment and capture of impacted groundwater by the recovery wells.

#### 3.1 Process Water Quality Monitoring

Processed groundwater is analyzed to comply with calculations submitted by the Navy and documented in the NYSDEC Water Division SPDES Equivalent Application for the effluent limitations and monitoring requirements. These results are also submitted to NYSDEC on a monthly basis in the form of a Discharge Monitoring Report (DMR). A copy of the current NYSDEC effluent limitations, monitoring constituents, and the reporting forms are included in **Appendix A**.

Monthly aqueous samples are collected from the active recovery well, RW-1, RW-3, and the treated effluent (TE) discharge line. In addition, various intermediary process system samples are collected monthly, consisting of air stripper effluent (ASE), bag filter effluent (BFE), and effluent of each of the three LGAC units (LC1, LC2, and LC3). The analytical results of monthly process water samples collected during the First Quarter are presented in **Table 1**. The data demonstrate that all permitted constituents were in compliance with regulatory requirements during the First Quarter. **Table 1** also summarizes the average monthly flowrates in gallons per minute along with the total volume of water processed during each month of the First Quarter. Monthly DMRs for the First Quarter (January – March 2019) are included in **Appendix A**.

Based on NYSDEC's interest with several non-VOC parameters in groundwater near Bethpage Water District Plant 4, the Navy has agreed to sample and analyze groundwater for 1,4-dioxane (USEPA Method 8270D) on a monthly basis from the system's treated effluent. Analytical results for 1,4-dioxane are provided as **Table 1**. In addition, groundwater samples are collected and analyzed for radium 226 and radium 228 (USEPA Method 903.1 and 904.0/9320) on an annual basis from RW-1, RW-3 and the system's treated effluent. Radium analytical results from the March 2019 and previous sampling events are presented in **Table 2**.

#### 3.2 Air Quality Monitoring

Treated off-gas discharged at the stack of the GWTP is subject to emissions limitations. Original discharge goals were derived from calculations submitted by the Navy and approved by the NYSDEC Division of Air Resources (DAR) in July 2009. In November 2011, the Navy submitted an evaluation proposing revised discharge goals, which NYSDEC approved in October 2013. A copy of this documentation is included as **Appendix B**.

While only sampling of the stack emissions is required for NYSDEC compliance, process vapor samples are also collected using 6-L summa canisters at various locations to monitor for breakthrough of the VGAC units. The analytical results of monthly influent and effluent vapor samples as well as midfluent samples (VC12 and VC13) collected during the First Quarter are presented in **Table 3**. Air emissions calculations using the stack vapor concentrations along with discharge flowrates are presented in **Table 4**. The calculations demonstrate that all constituents were within the regulatory requirements during the First Quarter based on the calculated emission rates.

### 3.3 Groundwater Quality Monitoring

The groundwater monitoring well system at the GM-38 Groundwater Remediation Area consists of fourteen monitoring wells, three recovery wells (RW-1, RW-2, RW-3) and one injection well (IW-1). Groundwater level measurements were collected prior to sampling and are summarized in **Table 5**. Though RW-2 was installed in 2005, a pump was never installed in this well and the well is not operated as a recovery well due to concerns expressed by the Bethpage Water District. As mentioned above, pumping at RW-3 was suspended between July 2015 and June 2018. RW-3 was reactivated on 1 June 2018 to address persistent VOC concentrations at this location. Well locations are depicted on **Figure 3**.

Depth to water (DTW) measurements are collected from twelve of the monitoring wells on a quarterly basis. Prior to 2014, water quality samples were collected from eight of the monitoring wells on a quarterly basis; beginning in 2014, the sample collection frequency was reduced to semi-annually, with sample collection generally in the March and September time-frame. The monitoring network includes well clusters located near the recovery and injection wells as described below and as shown on **Figure 3**. In addition, two wells, GM-38D and GM-38D2, located at the corner of Arthur Avenue and Broadway, are monitored by others.

Semi-annual groundwater samples are collected from eight monitoring wells (RW1-MW1, RW1-MW3, RW2-MW1, RW3-MW1, RW3-MW2, RW3-MW3, RW3-MW4, and TP-01) and from two recovery wells (RW-1 and RW-3). Samples are collected from monitoring wells using bladder pumps in accordance with the U.S. Environmental Protection Agency (USEPA) low-flow sampling methodologies. Samples are collected from recovery wells RW-1 and RW-3 using the dedicated extraction pump as it is normally done during routine O&M sampling. Results of the groundwater sampling for the First Quarter are presented in Section 3.3.1 below, and descriptions of monitoring well locations are as follows:

#### Recovery Well 1 (RW-1) Monitoring Wells

The RW-1 cluster consists of three monitoring wells screened between 395 and 435 feet below ground surface (bgs). RW1-MW1 is located approximately 140 feet northwest of RW-1 and RW1-MW2 is located approximately 50 feet north of RW-1. RW1-MW3 is located approximately 400 feet northeast of RW-1, on the eastern side of Seaford Oyster Bay Expressway. All three wells are hydraulically monitored while only RW1-MW1 and RW1-MW3 are also monitored for water quality.

#### Recovery Well 2 (RW-2) Monitoring Wells

The RW-2 cluster consists of three monitoring wells screened between 470 and 510 feet bgs. RW2-MW1 is located approximately 60 feet northwest of RW-2, RW2-MW2 is located approximately 20 feet west of

RW-2, and RW2-MW3 is located approximately 100 feet west of RW-2. All three wells are hydraulically monitored while only RW2-MW1 is monitored for water quality.

#### Recovery Well 3 (RW-3) Monitoring Wells

The RW-3 cluster consists of four monitoring wells. RW3-MW2 and RW3-MW4 are screened between 475 and 495 feet bgs. RW3-MW1 and RW3-MW3 are screened between 330 and 350 feet bgs and 320 and 340 feet bgs, respectively. RW3-MW1 and RW3-MW2 are located approximately 500 feet west of the GM-38 cluster, at the intersection of Arthur Avenue and Leroy Avenue. RW3-MW3 and RW3-MW4 are located approximately 400 feet north of the intersection of Arthur Avenue and Broadway. All four wells are both hydraulically monitored and monitored for water quality.

#### TP-01

TP-01 is screened between 450 and 470 feet bgs and is located approximately 25 feet north of the GWTP building, inside the fenced area. It is hydraulically monitored to observe the change in water levels due to the influence from the pumping rates at the neighboring public water supply well field near the hot spot area and is also monitored for water quality.

#### Injection Well 1 (IW-1) Monitoring Well

There is one monitoring well associated with injection well IW-1. IW1-MW1 is screened between 20 and 150 feet bgs, is located approximately 20 feet south of IW-1 and is only hydraulically monitored on a quarterly basis.

### **3.3.1 Groundwater Quality Results**

KGS collected groundwater samples for the First Quarter on 5-7 March 2019. Field parameters measured during well purging, which consisted of pH, specific conductance (SC), temperature, oxidation-reduction potential (ORP), dissolved oxygen (DO), and turbidity are summarized in **Table 6**. Following stabilization of field parameters, groundwater samples were collected. Copies of the field logs and chain of custody documentation are presented in **Appendix C**.

Groundwater samples were submitted to a National Environmental Laboratory Accreditation Conference (NELAC), Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) certified laboratory, Analytical Laboratories Services, located in Middletown, PA. The samples were analyzed for VOCs (including tentatively identified compounds [TICs]) via USEPA Method 624, mercury via USEPA Method 245.1, total suspended solids (TSS) via USEPA Method SM20 2540D, and 1,4-dioxane via USEPA Method 8270D. Validated analytical sampling results collected during the First Quarter Monitoring Event are summarized in **Table 7**. Data validation reports are presented in **Appendix D**. Raw analytical data is provided under separate cover.

### **3.3.2 Quality Assurance/Quality Control Sampling**

Quality assurance/quality control (QA/QC) samples were collected during the First Quarter Monitoring Event in accordance with the *Final Sampling and Analysis Plan* (TtEC 2010a). These samples consisted of blind field duplicates (collected from RW3-MW3 during the First Quarter), matrix spike/matrix spike duplicate (MS/MSD) samples, equipment rinsate blanks (EB) collected at a rate of one per sampling

event, and trip blanks (TB) submitted at a rate of one per sample cooler. No contaminants were detected in the equipment blank or trip blank submitted for this event. The overall absence of contamination in the blanks indicates that quality control requirements were achieved.

For field duplicate samples, the precision between the original sample and its duplicate is evaluated by calculating the relative percent difference (RPD). RPDs for the First Quarter Monitoring Event are presented in the data validation report in **Appendix D**. As indicated, RPDs for all analytes were well below the guideline of 50%. This overall consistency between the samples and its duplicate verifies that proper sample collection methods were followed.

### 3.3.3 Groundwater Concentration Trends

Historical groundwater analytical results through the First Quarter are presented in **Table 8**. Groundwater analytical results of select VOCs (cis-1,2-DCE, PCE, TCE, and VC) for the First Quarter Monitoring Event are presented graphically as **Figure 4**. Additionally, concentration trends of select VOCs (cis-1,2-DCE, TCE, and PCE, as well as VC for RW-1) for each recovery well and the eight monitoring wells sampled during the First Quarter 2019 Monitoring Event are presented in **Figures 5 through 14** and discussed below.

**Figure 5** presents concentrations measured at recovery well RW-1. Concentrations of TCE have decreased from initial concentrations in early 2010 (747 µg/L detected in April 2010), remaining below 300 µg/L since the latter half of 2012 and decreasing to a low of 69.9 µg/L in February 2019. Concentrations of cis-1,2-DCE have followed a similar trend, decreasing from a high of 160 µg/L in February 2010 to a low of 4.36 µg/L in March 2019. PCE concentrations have also exhibited decreasing trends over time, with concentrations decreasing from 180 µg/L in February 2010 to a low of 16.2 µg/L in February 2019. Concentrations of VC have decreased below initial concentrations in 2010. After reaching a maximum concentration of 61 µg/L in February 2010, VC concentrations have remained below 5.0 µg/L since the final quarter of 2011 and below 1.0 µg/L since June 2013. Vinyl chloride was not detected during the First Quarter 2019.

**Figure 6** presents concentrations measured at recovery well RW-3. Concentrations of TCE have decreased from initial concentrations in February 2010 (660 µg/L), remaining below 300 µg/L from the latter half of 2012 through the Third Quarter 2015. RW-3 was taken off-line from 1 July 2015 until 1 June 2018, which may have contributed to the increased concentrations in 2016. However, since March 2016, TCE concentrations have decreased from 371 µg/L down to a low of 120 µg/L detected in March 2018 but have risen slightly to an average concentration of 154 µg/L during the First Quarter 2019. Concentrations of cis-1,2-DCE have consistently remained below 4.0 µg/L, and below 2.0 µg/L since September 2013, though the concentration increased slightly to 2.4 µg/L in March 2016, then decreased again below 2.0 µg/L since June 2018. PCE has only been detected infrequently at this location, with the most recent detection of 0.23 µg/L in March 2019. Vinyl chloride has not been detected during any monitoring event.

**Figure 7** presents concentrations measured at RW1-MW1, with the most recent data collected in the First Quarter 2019. Concentrations of TCE at this location have varied widely since initially sampled in May

2005 (53.6 µg/L). The TCE concentration in March 2019 (110 µg/L) was higher than the concentration reported in May 2005, but less than the highest concentration observed to date (175 µg/L in September 2013). The concentration of cis-1,2-DCE in the First Quarter 2019 (3.9 J µg/L) was below the initial concentration observed in May 2005 (78.6 µg/L) and the second lowest concentration observed to date. Concentrations of PCE have consistently remained below 1.0 µg/L.

**Figure 8** presents concentrations measured at RW1-MW3. Concentrations of cis-1,2-DCE and PCE have consistently remained below 1.0 µg/L. Concentrations of TCE have also consistently remained below 5 µg/L with a reported concentration of 4.5 J µg/L during the First Quarter 2019.

**Figure 9** presents concentrations measured at RW2-MW1. The concentration of TCE in the March 2019 (9.65 µg/L) was less than the initial concentration observed in May 2005 (37.6 µg/L), and well below the maximum concentration observed in March 2016 (43.9 µg/L). The concentration of cis-1,2-DCE observed in the First Quarter 2019 (2.42 J µg/L) was above the initial concentrations observed in May 2005 (non-detect) but below the maximum concentration observed in the March 2016 (15.3 µg/L). PCE has not been detected during any monitoring events.

**Figure 10** presents concentrations measured at RW3-MW1. The concentration of TCE in March 2019 (19.3 µg/L) was below initial concentration observed in January 2010 (35.0 µg/L) and approached the lowest concentration observed at this location to date (19.0 µg/L) observed in March 2018. Concentrations of cis-1,2-DCE have consistently remained below 1.0 µg/L and have not been detected since March 2015. Concentrations of PCE have consistently remained near or below 2.0 µg/L, with a concentration of 1.72 J µg/L in the First Quarter 2019.

**Figure 11** presents concentrations measured at RW3-MW2. The TCE concentration observed in March 2019 (118 µg/L) was below initial concentrations observed in January 2010 (160 µg/L), and below the maximum concentration observed in April 2010 (211 µg/L). Concentrations of cis-1,2-DCE at this location have consistently remained below 2.0 µg/L. PCE has only been detected infrequently at this location, with concentrations ranging from 0.28 J µg/L in August 2012 to 0.66 J µg/L in March 2016.

**Figure 12** presents concentrations measured at RW3-MW3. The TCE concentration observed in March 2019 (151 µg/L) is below both the initial concentration observed in January 2010 (350 µg/L) and the maximum concentration observed in June 2013 (410 µg/L). Concentrations of cis-1,2-DCE have remained near or below 2.0 µg/L since March 2012. PCE has remained below 1.0 µg/L for all events.

**Figure 13** presents concentrations measured at RW3-MW4. TCE concentrations have decreased since the initial monitoring event in January 2010 (21 µg/L), with a concentration of 2.12 J µg/L observed in the First Quarter 2019. PCE has only been detected during two monitoring events: in September 2015 at a concentration of 0.31 J µg/L and March 2016 at a concentration of 0.46 J µg/L. Cis-1,2-DCE has been detected infrequently since the initial monitoring event in January 2010 (0.46 µg/L), in September 2017 (0.21 J µg/L), and during the First Quarter 2019 at concentration of 0.35 J µg/L.

**Figure 14** presents concentrations measured at TP-01. The TCE concentration observed in March 2019 (28.3 µg/L) was less than initial concentrations observed in January 2010 (65 µg/L) and below the maximum concentration observed in March 2016 (62 µg/L). Concentrations of cis-1,2-DCE have

generally decreased over time, from an initial value of 190 µg/L in January 2010 to 6.01 µg/L in March 2019. PCE concentrations have remained below 1.0 µg/L since September 2013 and has not been detected since March 2017.

#### **4.0 CONCLUSIONS AND RECOMMENDATIONS**

The intent of the groundwater treatment system at GM-38 is to remove mass and reduce elevated VOC concentrations to levels similar to those in the surrounding aquifer, and in doing so minimize the impacts on downgradient water supply wells and currently unaffected portions of the aquifer. Based on the removal of VOCs by the GWTP and decreasing contaminant concentration trends observed in the recovery wells and several of the monitoring wells, progress toward these goals is apparent. Based on the concentrations in the groundwater wells, the GWTP should continue to be operated. The groundwater sampling frequency for the eight monitoring wells has been reduced to semi-annually in accordance with the O&M Manual. Water levels for the 12 monitoring wells will continue to be monitored on a quarterly basis.

**Note:**  
VOC analysis changed from SW846 8260B to EPA Method 624 in January 2010.  
D = Dilution  
J = estimated value  
ND = not detected  
NR = not reported / required  
R = rejected  
mg/L - milligrams per liter  
µg/L - micrograms per liter

(1) Analytical results presented above for samples collected from RW3-MW3 and RW3-MW4 in November 2010 are not consistent with historical trends, indicating samples may have been switched. For trend analysis, concentrations for RW3-MW3 were used for RW3-MW4 for November 2010 and vice versa.  
(2) VOCs were analyzed by USEPA Method 524.2 (as opposed to Method 624) in June 2013 to correlate with samples collected under the Bethpage Regional Plume Comprehensive Groundwater Sampling Plan conducted in June 2013.  
(3) RW-3, previously an active extraction well sampled on a monthly basis, was taken off-line on 7/1/15. RW-3 is now sampled semi-annually, in conjunction with the semi-annual LTM events.  
(4) Samples were analyzed for TCL VOCs, including tentatively identified compounds (TICs), beginning in March 2016. No TICs were detected, unless otherwise indicated.

Data prior to June 2011 were collected by others.

Commissioner**MEMORANDUM**

**TO:** Steven Scharf, DER

**FROM:** Jean Occidental, DOW, Bureau of Water Permits JO

**SUBJECT:** Naval Weapons Industrial Reserve Plant (NWIRP); DER Site # 1-01-001

**DRAINAGE BASIN:** na

**DATE:** June 6, 2008

In response to your request and the permittee's SPDES Permit Equivalent Application dated April 27, 2008, attached is the effluent criteria for the above noted groundwater remediation discharge.

The Division of Water does not have any regulatory authority over a discharge from a State, PRP, or Federal Superfund Site. The Division of Environmental Remediation will be responsible for ensuring compliance with the attached effluent criteria and approval of all engineering submissions. Additional Condition (1) identifies the contact to send all effluent results, engineering submissions, and modification requests. The Regional Water Engineer should be kept appraised of the status of these discharges and, in accordance with the attached criteria, receive a copy of the effluent results for informational purposes.

If you have any questions, please call me at (518) 402-8116.

## EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning: April 1, 2009and lasting until: April 1, 2014

the discharges from the treatment facility to Groundwater shall be limited and monitored by the operator as specified below:

Outfall and Parameters	Limitations		Units	Minimum Monitoring Requirements	
	Daily Avg.	Daily Max.		Measurement Frequency	Sample Type
Treated Groundwater Remediation Discharge from: Recovery Wells 1, 2, and 3					
Flow	Monitor	1100	GPM	Continuous	Recorder
pH (range)	5.5 - 8.5		SU	Weekly	Grab
1,1-Dichloroethane	NA	5	µg/l	Monthly <sup>1</sup>	Grab
1,2-Dichloroethane	NA	0.6	µg/l	Monthly <sup>1</sup>	Grab
1,1-Dichloroethene	NA	5	µg/l	Monthly <sup>1</sup>	Grab
cis-1,2-Dichloroethene	NA	5	µg/l	Monthly <sup>1</sup>	Grab
trans-1,2-Dichloroethene	NA	5	µg/l	Monthly <sup>1</sup>	Grab
Tetrachloroethene	NA	5	µg/l	Monthly <sup>1</sup>	Grab
1,1,1-Trichloroethane	NA	5	µg/l	Monthly <sup>1</sup>	Grab
Trichloroethene	NA	5	µg/l	Monthly <sup>1</sup>	Grab
Vinyl chloride	NA	2	µg/l	Monthly <sup>1</sup>	Grab
Mercury	NA	0.25	µg/l	Monthly <sup>1</sup>	Grab

## Footnotes:

- (1) The minimum measurement frequency shall be monthly following a period of 24 consecutive weekly sampling events showing no exceedances of the stated discharge limitations.

Naval Weapons Industrial Reserve Plant

DER site # 1-01-001

Page 1 of 2

Additional Conditions:

- (1) Discharge is not authorized until such time as an engineering submission showing the method of treatment is approved by the Department. The discharge rate may not exceed the effective or design treatment system capacity. All monitoring data, engineering submissions and modification requests must be submitted to:

Steven Scharf  
Division of Environmental Remediation  
NYSDEC, 625 Broadway  
Albany, NY 12233-7015  
Phone: (518) 402-9620

With a copy sent to:

Regional Water Engineer  
NYSDEC - Region 1  
Building 40, SUNY Campus  
Stony Brook, New York 11790-2356  
Phone: (631) 444-0354

- (2) Only site generated wastewater is authorized for treatment and discharge.
- (3) Authorization to discharge is valid only for the period noted above but may be renewed if appropriate. A request for renewal must be received 6 months prior to the expiration date to allow for a review of monitoring data and reassessment of monitoring requirements.
- (4) Any use of corrosion/scale inhibitors, biocidal-type compounds, or other water treatment chemicals used in the treatment process must be approved by the department prior to use.
- (5) This discharge and administration of this discharge must comply with the substantive requirements of 6NYCRR Part 750.

**Subject: GROUNDWATER DISCHARGE MONITORING/AIR EMISSION REPORT  
GM-38 AREA, NWIRP BETHPAGE, NY; DER SITE # 1-30-003B-OU 2  
JANUARY 2019 REPORTING PERIOD**

Dear Mr. Pelton:

KOMAN Government Solutions, LLC (KGS) is submitting this monthly monitoring report of the groundwater discharge and air emission results for the Groundwater Treatment Plant (GWTP) located at the Former Naval Weapons Industrial Reserve Plant (NWIRP), Bethpage, NY, GM-38 Area. This report was prepared in accordance with GWTP operational requirements for DER Site # 1-30-003B-OU 2, and the SPDES Permit Equivalent # 13003B.

GWTP operational data from 1 January to 31 January 2019 are presented in Attachment A. In the January reporting period, no significant downtime was recorded for the GM38.

As indicated in Attachment A, all SPDES permitted constituents were in compliance with regulatory guidelines during this reporting period.

Please contact me at 610-400-0622 with any questions or concerns you may have regarding this report.

Sincerely,

***KOMAN Government Solutions, LLC***

Stephane Roy  
Project Manager

**Subject: GROUNDWATER DISCHARGE MONITORING/AIR EMISSION REPORT  
GM-38 AREA, NWIRP BETHPAGE, NY; DER SITE # 1-30-003B-OU 2  
MARCH 2019 REPORTING PERIOD**

Dear Mr. Pelton:

KOMAN Government Solutions, LLC (KGS) is submitting this monthly monitoring report of the groundwater discharge and air emission results for the Groundwater Treatment Plant (GWTP) located at the Former Naval Weapons Industrial Reserve Plant (NWIRP), Bethpage, NY, GM-38 Area. This report was prepared in accordance with GWTP operational requirements for DER Site # 1-30-003B-OU 2, and the SPDES Permit Equivalent # 13003B.

GWTP operational data from 1 March to 31 March 2019 are presented in Attachment A. In the March reporting period, no significant downtime was recorded for the GM38.

As indicated in Attachment A, all SPDES permitted constituents were in compliance with regulatory guidelines during this reporting period.

Please contact me at 610-400-0622 with any questions or concerns you may have regarding this report.

Sincerely,

***KOMAN Government Solutions, LLC***

Stephane Roy  
Project Manager

RE: Northrop Grumman, Naval Weapons Industrial Reserve Plant (NWIRP) and Grumman Steel Los Sites, NYSDEC Site No.'s I-30-003 A & B.

Dear Ms. Fly:

Tetra Tech NUS Inc., on behalf of the Department of the Navy NAVFAC Midlantic, has submitted an application to remove the GM 38 Area Groundwater Extraction and Treatment system impregnated Xeolite™ resin from the air discharge treatment system. Currently, the air treatment system uses a combined activated carbon with permanganate impregnated resin treatment train. The New York State Department of Environmental Conservation (NYSDEC) has reviewed the Department of the Navy application and concurs with the findings presented.

The routine monitoring, as detailed in Table 1, clearly indicates that vinyl chloride, one of the main contaminants of concern, has diminished to almost non-detect, and discharge concentrations have dropped to below the limit to require air treatment for the other contaminants as well. However, NAVFAC Midlantic is still proposing activated carbon to reduce the other discharge contaminant levels. Therefore, the NYSDEC hereby approves the proposed changes to the GM 38 Area air treatment. The Xeolite™ resin beds will remain in place should reactivation, based on routine monitoring, be required.

If you have any questions in the interim, please contact me at (518)402-9620.

Sincerely,

Steven M. Scharf, P.E.

Contract Task Order WE06

Subject: Proposed Modification to Discharge Limits for Off Gas Volatile Organic Compounds (VOCs)  
for Air Stripping Tower  
GM-38 Offsite Groundwater Treatment Plant,  
NWIRP Bethpage, New York

Dear Mr. Scharf:

On behalf of the Navy, please find enclosed a copy of the subject document. This document presents an evaluation of current concentrations of off gas VOCs from the GM-38 groundwater treatment plant air-stripping tower (prior to treatment with granular activated carbon). Maximum emission rates were re-evaluated due to decreasing maximum concentrations of target VOCs in un-treated air stripper AS-1 off gas. In addition, breakthrough of target contaminants (e.g., cis-1,2-dichloroethene) is beginning to occur in the granular activated carbon bed. Maximum emission rates were re-evaluated to provide a determination if breakthrough of contaminants would trigger the need for a replacement of the granular activated carbon bed.

Existing Discharge Goals were established in the "Final Operation, Maintenance and Monitoring Plan for Groundwater Treatment Plant GM-38 Area Groundwater Remediation" prepared by Tetra Tech EC (April 2010). Existing goals were based on emission estimates for a 95% reduction (see Attachment A), instead of being based on the original DAR-1 analysis of air stripper off gas. Emission estimates were calculated using the air stripper design flow rate of 8,000 cubic feet per minute (cfm), and previous contaminant discharge rates in pounds per hour (lb/hr). Original emission estimates are provided in Attachment B.

Proposed Revised Discharge Goals were calculated using an average flow rate of 9,200 cfm, January to March 2011 VOC loading rates (taken from the Quarterly Operations Report First Quarter 2011 from ECOR Federal Services), and the Actual Annual % of Annual Guideline Concentrations (AGCs), taken from the revised DAR-1 Model Output. The revised DAR-1 Model Output is provided in Attachment C. Existing Discharge Goals and Proposed Revised Discharge Goals are compared in tabular format in the first page of the attachment. Proposed Revised Discharge Goals for trichloroethene (TCE) are the same as previous. The proposed limit for tetrachloroethene (PCE) is approximately 10 times the previous limit, and vinyl chloride is approximately 2 times the previous limit. Revised Discharge Goals for 1,2-dichloroethene (goals are the same for cis-1,2-dichloroethene) are 100 times greater than previously established limits. It is recommended that these revised limits replace previous discharge goals, and treatment of air stripper off gas by granular activated carbon is recommended to continue for TCE and PCE, with no treatment required for vinyl chloride and 1,2-dichloroethene.

If you have any questions please contact Ms. Lora Fly, NAVFAC Mid-LANT, at (757) 341-2012.

Sincerely,

David D. Brayack, P.E.  
Project Manager

**AIR STRIPPING TOWER GM-38 OFFSITE GROUNDWATER TREATMENT PLANT**  
**NWIRP BETHPAGE, NEW YORK**

Chemical	Existing Discharge Goal		Actual January to March 2011 Values (Pre-Off Gas Treatment)		Proposed Revised Discharge Goals based on DAR-1 Analysis	
	Existing Discharge Loading Rate (pounds (lbs)/hour) <sup>(1)</sup>	Equivalent Existing Discharge Goals ( $\mu\text{g}/\text{m}^3$ ) <sup>(2)</sup>	Actual Jan-Mar 2011 Concentration ( $\mu\text{g}/\text{m}^3$ ) <sup>(3)</sup>	Actual VOC Loading Pre-Off Gas Treatment (lbs/hour) <sup>(4)</sup>	Proposed Discharge Loading Rate (lbs/hour) <sup>(5)</sup>	Equivalent Proposed Discharge Goal ( $\mu\text{g}/\text{m}^3$ ) <sup>(5)</sup>
TCE	0.09	2,600	10,000	0.345	0.09	2,600
PCE	0.02	580	6,800	0.234	0.18	5,100
Vinyl Chloride	0.01	290	76	0.003	0.02	560
1,2-Dichloroethene (total)	0.03	870	750	0.026	11	greater than 100,000

**Notes:**

<sup>(1)</sup>Existing Discharge Goals are based on the design flow rate of 8,000 cfm. Existing Discharge Goals were taken from the Final Operations and Maintenance Plan for GM-38 Area Groundwater Remediation from Tetra Tech EC. Existing goals were based on emission estimates for a 95% reduction, and not the previous DAR-1 Analysis. Attachment B (provided at the end of this package) provides the original emission estimates.

<sup>(2)</sup>Existing Discharge Goals were calculated using the actual flow rate of 9,200 cfm and the existing discharge loading rate in pounds per hour (lb/hr).

<sup>(3)</sup>Values were taken from the Quarterly Operations Report First Quarter 2011 from ECOR Federal Services. Values were the maximum effluent concentration in off gas from air stripper stack AS-1 prior to treatment with vapor phase granular activated carbon (GAC), for the months of January, February and March 2011.

<sup>(4)</sup>Actual VOC Loading was calculated using an average flow rate of 9,200 cfm and the January-March 2011 concentrations. Existing off gas treatment consists of two stage vapor phase GAC followed by potassium permanganate zeolite media to provide additional treatment for vinyl chloride.

<sup>(5)</sup>Values were calculated using an average flow rate of 9,200 cfm, and the Actual Annual % of the AGCs from the 2011 DAR-1 Model Output to achieve air quality requirements.

<b>Emission Unit Description</b>										<input type="checkbox"/> Continuation Sheet(s)
EMISSION UNIT	0	-	0	0	E	U	1			
Air Stripper AS-1 for groundwater remediation, provided with activated carbon for emission control.										
The emission point is stack 00ST-1. The 2-stage VGAC is followed by a 3rd vessel containing a potassium permanganate zeolite media for increased VC capacity.

Process Information										<input type="checkbox"/> Continuation Sheet(s)	
EMISSION UNIT 0 - 00 E U 1								PROCESS		PR 1	
Description											
The remedial system is air stripping, using a packed column at a groundwater flow rate of 1,100 gpm (plus 100 gpm recycle, for a total of 1,200 gpm). Vapor phase treatment includes the use of 3 vessels, a 2-stage GAC unit, followed by a 3rd vessel containing a potassium permanganate impregnated zeolite for increased VC capacity. Prior to entering the vapor-phase GAC adsorption system, the humidity of the air stripper exhaust is reduced to approximately 50 percent or less to optimize the efficiency of the vapor-phase GAC.											
Air Stripper AS-1: Existing. Type: Vertical, Cylindrical Construction: Aluminum											
Packing: 25-foot Jaeger Tripack. Dimensions: 10.0 ft. Dia x 47 ft. H

**ATTACHMENT C**  
**2011 DISCHARGE GOALS AND 2011 DAR-1 ANALYSIS**

Tetra Tech NUS		STANDARD CALCULATION SHEET	
CLIENT: US CLEAN	FILE No:	BY: SK	PAGE: 1 of 1
SUBJECT: Calculation of Current Discharge Goals GM-38 Area NWIRP Bethpage, New York		CHECKED BY:	DATE: 9/7/2011

**1. Purpose:**

To calculate current discharge goals for Trichloroethene (TCE), Tetrachloroethene (PCE), Vinyl Chloride, cis 1,2-Dichloroethene, and 1,2-Dichloroethene (total), for treatment of off-gas from the air stripper stack AS-1.

**2. Approach:**

From the Contaminant Assessment Summary of the DAR-1 Model output for TCE, PCE, Vinyl Chloride, cis 1,2-Dichloroethene, and 1,2-Dichloroethene (total) (see DAR-1 output for analysis inputs), use the Actual Annual % of the Annual Guideline Concentration (AGC), a current average flow rate of 9,200 cubic feet per minute (cfm), and influent chemical emission rates in pounds per hour (lb/hour) and pounds per year (lb/year) to back calculate current discharge goals.

**3. Calculation of Current Discharge Goals:**

Chemical	Current Actual Annual % of AGC <sup>(1)</sup>	Current Maximum Concentration (µg/m <sup>3</sup> ) <sup>(2)</sup>	Current Chemical Emission Rate Prior to Treatment (lb/hour) <sup>(3)</sup>	Current Chemical Emission Rate Prior to Treatment (lb/year) <sup>(3)</sup>	Calculated Discharge Goal (lb/hr) <sup>(4)</sup>	Calculated Discharge Goal (lb/year) <sup>(4)</sup>	Maximum Allowable Concentration (µg/m <sup>3</sup> ) <sup>(4)</sup>
TCE	390.6	10,000	0.3446	3,019	0.0882	770	2,600
PCE	132.8	6,800	0.2344	2,053	0.1764	1,500	5,100
Vinyl Chloride	13.49	76	0.0026	22.94	0.0194	170	560
cis 1,2-Dichloroethene	0.2322	750	0.0258	226.4	11.13	98,000	320,000
1,2-Dichloroethene (total)	0.2322	750	0.0258	226.4	11.13	98,000	320,000

**Notes:**

<sup>(1)</sup>Actual Annual % of the AGCs is from the attached DAR-1 Model Output.

<sup>(2)</sup>Values were taken from the Quarterly Operations Report First Quarter 2011 (June 2011) from ECOR Federal Services. Values were the maximum effluent concentration in off gas from air stripper stack AS-1 for the months of January, February, and March 2011.

<sup>(3)</sup>Chemical Emission Rates were calculated from maximum concentrations and an average flow rate of 9,200 cfm.

<sup>(4)</sup>Discharge Goals are based on a flow of 9,200 cfm, and calculated from the Actual Annual % of the AGCs from the DAR-1 Model Output to achieve air quality requirements. The summary of additional inputs for this model run is provided in the DAR-1 Model Output. Stack height is 40 feet, and the property line was evaluated at a distance of 50 feet.

 INCLUDES ISCLT MODELING SUMMARY

- I. Summary of Inputs for Model Run to Nearest Property Line (50 feet), worst case scenario (highest contaminant concentrations seen in first quarter 2011 in untreated effluent from Air Stripper AS-1 prior to treatment with granular activated carbon (GAC))

Chemical	CAS No. 00079-01- 6 (TCE)	CAS No. 00127-18- 4 (PCE)	CAS No. 00075-01-4 (Vinyl Chloride)	CAS No. 00156-59-2 (cis 1,2- Dichloroethene)	CAS No. 00540-59-0 (1,2- Dichloroethene, total)
Emission Rate Prior to Treatment <sup>(1)</sup> (lb/hour)	0.3444	0.2342	0.0026	0.0258	0.0258
Emission Rate Prior to Treatment <sup>(1)</sup> (lb/year)	3,017	2,052	22.93	226.0	226.0
Maximum Concentration of Untreated Off Gas ( $\mu\text{g}/\text{m}^3$ ) <sup>(1)</sup>	10,000	6,800	76	750	750
Annual Guideline Concentration (AGC) ( $\mu\text{g}/\text{m}^3$ )	0.5	1.0	0.11	63	63
Short-term Guideline Concentration (SGC) ( $\mu\text{g}/\text{m}^3$ )	14,000	1,000	180,000	--	--

HA	Height Above stack/ maximum height of plume (HA, feet)	15
SH	Stack Height/Treatment Building Air Stack (SH, feet)	40
D	Stack Diameter (D, inches)	36
T	Stack Exit Temperature (T, degrees Fahrenheit)	80
V	Stack Exit Velocity (V, ft/sec)	21.69
Q <sup>(2)</sup>	Stack Exit Flow Rate [Q, Actual Cubic Feet per Minute (ACFM)]	9,200
Dpl	Shortest Distance from Source Building (Treatment Building) to Property Line (Dpl, feet) for point sources	50
BW	Building Width (BW, feet) of Source Building (Treatment Building) for point sources	75
BL	Building Length (BL, feet) of Source Building (Treatment Building)	75
Q	Actual Hourly Emission Rate (lbs/hour) for source contaminant	Chemical specific, see above
Qa	Actual Annual Emission Rate (lbs/year) for source contaminant	Chemical specific, see above

<sup>(1)</sup> Emission rates and maximum concentration values were taken from the Quarterly Operations Report First Quarter (June 2011) as provided by ECOR Services, using January, February, and March 2011 maximum rates of untreated off gas from Air Stripper AS-1 in the

GM-38 Treatment Building. Emission rates are based on continuous operation 24 hours per day, 7 days a week, 52 weeks a year, or approximately 8,760 hours of operation.

<sup>(2)</sup> "Q" is an average value of January and February 2011 monthly flow rates. Effective water and vapor flow rates were reduced during the reporting period of March due to a shutdown of the Treatment Plant on March 23, 2011.

II. Contaminant Assessment Summary of TCE, PCE, Vinyl Chloride, cis 1,2-Dichloroethene, and 1,2-Dichloroethene (total):

CONTAMINANT ASSESSMENT SUMMARY OF DAR-1 ANALYSIS						9/ 8/11

** Reported Hourly Emission Rate <Q> is equal to          0.344400000 lbs/hour.
** Reported Annual Emission Rate <Qa> is equal to          3017.000000 lbs/year.
II.B.  REFINED CAVITY IMPACT METHOD <DAR-1, APPENDIX B>.
II.B.1.  Shortest Distance from building to Property Line <  50. feet >
         is less than or equal to the cavity length, or 3 building
         heights <  75. feet >. Therefore, this building will have
         cavity impacts <if they occur> at receptors off plant property.
II.B.2.  The largest building dimension <  75. feet > is greater than or
         equal to the building height <  25. feet >. Therefore, the
         computer will NOT redefine the cavity length.
II.B.3.  Stack height <  40. feet > is greater than cavity height
         <  38. feet >. Therefore, this source does not contribute to
         the buildings cavity impact. The Computer will assume the
         CAVITY Annual Impact equals 0.00 ug/m3.
II.C.  CAVITY Annual Impact <  0.000 ug/m3 > is less than AGC
         <  0.500 ug/m3 >.
III.A.  STANDARD POINT SOURCE METHOD <DAR-1, APPENDIX B>.
III.A.1.b.  Momentum flux, Fm, is equal to  1000.331 ft<4>/sec<2>.
III.A.1.b.  Effective stack height, he, is equal to  51.001 feet.
III.A.2.  STANDARD POINT SOURCE Actual Annual Impact is equal
         to  2.604 ug/m3 for  8760. hours/year of operation.
III.A.3.  STANDARD POINT SOURCE Potential Annual Impact is equal
         to  2.601 ug/m3 assuming 8,760 hours/year of operation.
III.A.4.a.  Stack height to building height ratio is greater than
         1.5, but less than 2.5. Computer will multiply actual
         annual & potential annual impacts by 0.75 factor.

```

III.A.5. STANDARD POINT SOURCE Short-Term Impact is calculated below using the DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.

III.B. STANDARD POINT SOURCE Actual Annual Impact < 1.953 ug/m3 > is greater than AGC < 0.500 ug/m3 >.

\*\*\*\* Refer to DAR-1 Section III.D.1. A refined site \*\*\*\*  
\*\*\*\* specific modeling analysis may be required. \*\*\*\*

III.D. STANDARD POINT SOURCE Potential Annual Impact < 1.951 ug/m3 > is greater than AGC < 0.500 ug/m3 >.

\*\*\*\* Potential Annual Impact is based upon 8760 hours/year \*\*\*\*  
\*\*\*\* operation instead of reported 8760. hours/year. \*\*\*\*

2.0 DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.  
See 'Technical Reference for the Screening Procedures of the DAR-1 Software Program, Wade/Sedefian,' 1/11/94.

2.2 CAVITY Short-Term Impact is equal to 0.00 ug/m3 as the plume escaped the cavity region:  $hs < 40. \text{ feet} > > hc < 26. \text{ feet} >$ .

II.C. CAVITY Short-Term Impact < 0.000 ug/m3 > is less than SGC < 14000.000 ug/m3 >.

2.3 Momentum flux,  $F_m$ , is equal to 1000.331 ft(4)/sec(2).

2.3 Effective stack height,  $h_e$ , is equal to 51.001 feet.

2.4 Maximum non-downwash GEP stack Short-Term Impact (CSTP) is equal to 38.826 ug/m3, for  $hs/hb = 1.60$

2.5 Maximum downwash Short-Term Impact (CSTD) is equal to 129.908 ug/m3, for:  $hs/hb = 1.60$  and  $ESH = 51. \text{ feet}$ .

2.6 Adjusted maximum downwash Short-Term (CSTD) is equal to 108.603 ug/m3, for:  $RF = 0.84$

III.D. Maximum non-cavity Short-Term Impact (CST: 108.603 ug/m3 > is less than the SGC < 14000.000 ug/m3 > for the point source.

2.7 Maximum Short-Term cavity, point, or area source impact (SHORT-TERM MAXIMUM, (Cav,Pt,Area)) equals 108.603 ug/m3 and is reported in the ANALYSIS MENU. This value is less than the SGC < 14000.000 ug/m3 >.

V. Contaminant Impact Summary Step by Step Menu for PCE:

```

** Reported Hourly Emission Rate (Q) is equal to          0.234200000 lbs/hour.
** Reported Annual Emission Rate (Qa) is equal to          2052.000000 lbs/year.
II.B. REFINED CAVITY IMPACT METHOD (DAR-1, APPENDIX B).
II.B.1. Shortest Distance from building to Property Line ( 50. feet )
is less than or equal to the cavity length, or 3 building
heights ( 75. feet ). Therefore, this building will have
cavity impacts (if they occur) at receptors off plant property.
II.B.2. The largest building dimension ( 75. feet ) is greater than or
equal to the building height ( 25. feet ). Therefore, the
computer will NOT redefine the cavity length.
II.B.3. Stack height ( 40. feet ) is greater than cavity height
( 38. feet ). Therefore, this source does not contribute to
the buildings cavity impact. The Computer will assume the
CAVITY Annual Impact equals 0.00 ug/m3.
II.C. CAVITY Annual Impact ( 0.000 ug/m3 ) is less than AGC
( 1.000 ug/m3 ).
III.A. STANDARD POINT SOURCE METHOD (DAR-1, APPENDIX B).
III.A.1.b. Momentum flux, Fm, is equal to 1000.331 ft<4>/sec<2>.
III.A.1.b. Effective stack height, he, is equal to 51.001 feet.
III.A.2. STANDARD POINT SOURCE Actual Annual Impact is equal
to 1.771 ug/m3 for 8762. hours/year of operation.
III.A.3. STANDARD POINT SOURCE Potential Annual Impact is equal
to 1.769 ug/m3 assuming 8,760 hours/year of operation.
III.A.4.a. Stack height to building height ratio is greater than
1.5, but less than 2.5. Computer will multiply actual
annual & potential annual impacts by 0.75 factor.
```

III.A.5. STANDARD POINT SOURCE Short-Term Impact is calculated below using the DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.

III.D. STANDARD POINT SOURCE Actual Annual Impact ( 1.328 ug/m3 ) is greater than AGC ( 1.000 ug/m3 ).

\*\*\*\* Refer to DAR-1 Section III.D.1. A refined site specific modeling analysis may be required. \*\*\*\*

III.D. STANDARD POINT SOURCE Potential Annual Impact ( 1.327 ug/m3 ) is greater than AGC ( 1.000 ug/m3 ).

\*\*\*\* Potential Annual Impact is based upon 8760 hours/year operation instead of reported 8762. hours/year. \*\*\*\*

2.0 DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.  
See "Technical Reference for the Screening Procedures of the DAR-1 Software Program, Wade/Sedefian," 1/11/94.

2.2 CAVITY Short-Term Impact is equal to 0.000 ug/m3 as the plume escaped the cavity region:  $h_c(40. \text{ feet}) > h_c(26. \text{ feet})$ .

II.C. CAVITY Short-Term Impact ( 0.000 ug/m3 ) is less than SGC ( 1000.000 ug/m3 ).

2.3 Momentum Flux,  $F_m$ , is equal to 1000.331 ft<sup>4</sup>/sec<sup>2</sup>.

2.3 Effective stack height,  $h_e$ , is equal to 51.001 feet.

2.4 Maximum non-downwash GEP stack Short-Term Impact (CSTP) is equal to 26.403 ug/m3, for  $h_c/h_b = 1.60$

2.5 Maximum downwash Short-Term Impact (CSTD) is equal to 88.340 ug/m3, for:  $h_c/h_b = 1.60$  and ESH = 51. feet.

2.6 Adjusted maximum downwash Short-Term (CSTD) is equal to 73.852 ug/m3, for: RF = 0.84

III.D. Maximum non-cavity Short-Term Impact (CST: 73.852 ug/m3 ) is less than the SGC ( 1000.000 ug/m3 ) for the point source.

2.7 Maximum Short-Term cavity, point, or area source impact (SHORT-TERM MAXIMUM, (Cav,Pt,Area)) equals 73.852 ug/m3 and is reported in the ANALYSIS MENU. This value is less than the SGC ( 1000.000 ug/m3 ).

NWIRP BETHPAGE GM-38 AREA          BETHPAGE          OYSTER BAY, NEW
EMISSION POINT =          TOTAL          CAS NUMBER = 00540-59-0          SIC = 0
AGC =          63.000000000 ug/m3          SGC =          0.000000 ug/m3
STACK: HA=          15., SH=          40., D=          36., T=          80., U=          21.69, q=          9200.00
BUILDING: Dpl=          50., BW=          75., BL=          75., %CONTROL=          0.0000
** Reported Hourly Emission Rate <Q> is equal to          0.025800000 lbs/hour.
** Reported Annual Emission Rate <Qa> is equal to          226.000000 lbs/year.
II.B. REFINED CAVITY IMPACT METHOD <DAR-1, APPENDIX B>.
II.B.1. Shortest Distance from building to Property Line < 50. feet >
is less than or equal to the cavity length, or 3 building
heights < 75. feet >. Therefore, this building will have
cavity impacts <if they occur> at receptors off plant property.
II.B.2. The largest building dimension < 75. feet > is greater than or
equal to the building height < 25. feet >. Therefore, the
computer will NOT redefine the cavity length.
II.B.3. Stack height < 40. feet > is greater than cavity height
< 38. feet >. Therefore, this source does not contribute to
the buildings cavity impact. The Computer will assume the
CAVITY Annual Impact equals 0.00 ug/m3.
II.C. CAVITY Annual Impact < 0.000 ug/m3 > is less than AGC
< 63.000 ug/m3 >.
III.A. STANDARD POINT SOURCE METHOD <DAR-1, APPENDIX B>.
III.A.1.b. Momentum flux, Pm, is equal to 1000.331 ft<4>/sec<2>.
III.A.1.b. Effective stack height, he, is equal to 51.001 feet.
III.A.2. STANDARD POINT SOURCE Actual Annual Impact is equal
to 0.195 ug/m3 for 8760. hours/year of operation.
III.A.3. STANDARD POINT SOURCE Potential Annual Impact is equal
to 0.195 ug/m3 assuming 8,760 hours/year of operation.
III.A.4.a. Stack height to building height ratio is greater than
1.5, but less than 2.5. Computer will multiply actual
annual & potential annual impacts by 0.75 factor.

```

```

III.A.5. STANDARD POINT SOURCE Short-Term Impact is calculated below
         using the DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.

III.D.  STANDARD POINT SOURCE Actual Annual Impact <      0.146 ug/m3 > is
         less than AGC <      63.000 ug/m3 >.

III.D.  STANDARD POINT SOURCE Potential Annual Impact <      0.146 ug/m3 >
         is less than AGC <      63.000 ug/m3 >.

**** Potential Annual Impact is based upon 8760 hours/year      ****
**** operation instead of reported 8760. hours/year.          ****

2.0     DAR-1 SOFTWARE PROGRAM SHORT-TERM METHOD.
         See "Technical Reference for the Screening Procedures of the
         DAR-1 Software Program, Wade/Sedefian," 1/11/94.

2.2     CAVITY Short-Term Impact is equal to 0.00 ug/m3 as the plume
         escaped the cavity region: hs< 40. feet> > hc< 26. feet>.

II.C.   CAVITY Short-Term Impact is equal to      0.000 ug/m3.
         There is no SGC for this contaminant.

2.3     Momentum flux, Fm, is equal to 1000.331 ft(4)/sec(2).

2.3     Effective stack height, he, is equal to 51.001 feet.

2.4     Maximum non-downwash GEP stack Short-Term Impact (CSTP) is equal
         to 2.909 ug/m3, for hs/hb = 1.60

2.5     Maximum downwash Short-Term Impact (CSTD) is equal
         to 9.732 ug/m3, for: hs/hb = 1.60 and ESH = 51. feet.

2.6     Adjusted maximum downwash Short-Term (CSTD) is equal
         to 8.136 ug/m3, for: RF = 0.84

III.D.  Maximum non-cavity Short-Term Impact (CST) equals 8.136 ug/m3
         for the point source. There is no SGC for this contaminant.

2.7     Maximum Short-Term cavity, point, or area source impact
         (SHORT-TERM MAXIMUM, <Cav.Pt.Area>) equals 8.136 ug/m3
         and is reported in the ANALYSIS MENU.

```

**APPENDIX D**

**DATA VALIDATION REPORTS**

**VOLATILE ORGANIC COMPOUNDS**  
USEPA Region II –Data Validation

**Project Name:** Naval Weapons Industrial Reserve Plant, GM-38 Area-LTM  
**Location:** 100 Broadway, Bethpage, NY  
**SDG #:** R1902053  
**Client:** KOMAN Government Solutions, LLC  
**Date:** 04/24/2019  
**Laboratory:** ALS Environmental, Middletown, PA  
**Reviewer:** Sherri Pullar

**Summary:**

1. Data validation was performed on the data for nine (9) water samples, two (2) trip blanks and one (1) equipment blank analyzed for Volatiles by EPA Method 624.1.
2. The samples were collected on 3/05 thru 3/07/2019. The samples were submitted to ALS Environmental, Middletown, PA on 3/08/2019 for analysis.
3. The USEPA Region II SOP HW-34, Revision No.: 3, Trace Volatile Data Validation; USEPA National Functional Guidelines for Organic Data Review, EPA 540/R-2017-002, January 2017; EPA Method 624 and Quality Assurance Project Plan for GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, NY; September 3, 2009 were used in evaluating the Volatiles data in this summary report.
4. In general, the data are valid as reported and may be used for decision making purposes. Selected data points were qualified due to nonconformance of certain Quality Control criteria (See discussion below).

**Samples:**

The samples included in this review are listed below:

Client Sample ID	Laboratory Sample ID	Collection Date	Matrix	Sample Status
GM-38-GW-RW3-MW4-0319	R1902053-001	3/05/2019	Water	
GM-38-GW-RW3-MW3-0319	R1902053-002	3/05/2019	Water	
GM-38-GW-RW3-MW3-DUP-0319	R1902053-003	3/05/2019	Water	Field Duplicate of sample GM-38-GW-RW3-MW3-0319
GM-38-GW-RW3-MW2-0319	R1902053-004	3/05/2019	Water	
GM-38-GW-RW3-MW1-0319	R1902053-005	3/05/2019	Water	
GM-38-GW-TP1-0319	R1902053-006	3/06/2019	Water	
GM-38-EB-0319	R1902053-007	3/06/2019	Water	Equipment Blank
GM-38-TB01-0319	R1902053-008	3/05/2019	Water	Trip Blank
GM-38-TB2-0319	R1902053-009	3/05/2019	Water	Trip Blank
GM-38-GW-RW1-MW1-0319	R1902053-010	3/07/2019	Water	
GM-38-GW-RW2-MW1-0319	R1902053-011	3/07/2019	Water	
GM-38-GW-RW1-MW3-0319	R1902053-012	3/07/2019	Water	

**Sample Conditions/Problems:**

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

**Holding Times:**

1. All water samples were analyzed within 14 days from sample collection. No qualifications were required.
2. All water samples were properly preserved (pH<2.0). No qualifications were required.

**GC/MS Tuning:**

1. All of the BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria. No qualifications were required.

**Initial Calibration:**

1. Initial calibration curve analyzed on 3/15/2019 (R-MS-12) exhibited acceptable %RSD and average RRF values for all compounds. No qualifications were required.
2. Initial calibration curve analyzed on 3/12/2019 (R-MS-10) exhibited acceptable %RSD and average RRF values for all compounds. No qualifications were required.

**Continuing Calibration Verification (CCV):**

1. CCV analyzed (R-MS-12) exhibited acceptable %Ds ( $\leq 20.0\%$ ) for all compounds. No qualifications were required.
2. CCV analyzed (R-MS-10) exhibited acceptable %Ds ( $\leq 20.0\%$ ) for all compounds. No qualifications were required.

**Surrogates:**

1. All surrogates %REC values for all water samples and associated QC were within the laboratory control limits. No qualifications were required.

**Internal Standard (IS) Area Performance:**

1. All samples exhibited acceptable area count for all three internal standards. No qualifications were required.

**Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB):**

1. Method Blank (RQ1902312-03) analyzed on 3/15/2019 contained tetrachloroethene (0.267  $\mu\text{g/L}$ ).  
  
Results for tetrachloroethene were qualified as non-detect (U, reported to the LOD) in samples GM-38-GW-RW3-MW3-0319, GM-38-GW-RW3-MW3-DUP-0319, GM-38-GW-RW3-MW2-0319, and GM-38-GW-RW1-MW1-0319 and non-detect (U) in sample GM-38-GW-RW3-MW1-0319.
2. Method Blank (RQ1902319-04) analyzed on 3/18/2019 was free of contamination. No qualifications were required.

3. Method Blank (RQ1902079-05) analyzed on 3/12/2019 was free of contamination. No qualifications were required.
4. Equipment Blank (GM-38-EB-0319) (R1902053-007) analyzed on 3/18/2019 was free of contamination. No qualifications were required.
5. Trip Blank (GM-38-TB01-0319) (R1902053-008) analyzed on 3/12/2019 was free of contamination. No qualifications were required.
6. Trip Blank (GM-38-TB02-0319) (R1902053-009) analyzed on 3/12/2019 was free of contamination. No qualifications were required.

**Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD):**

1. Laboratory Control Sample (RQ1902312-02) was analyzed on 03/15/2019. All %RECs were within the laboratory control limits. No qualifications were required.
2. Laboratory Control Sample (RQ1902319-03) was analyzed on 03/18/2019. All %RECs were within the laboratory control limits. No qualifications were required.
3. Laboratory Control Sample (RQ1902079-04) was analyzed on 03/12/2019. All %RECs were within the laboratory control limits. No qualifications were required.

**Field Duplicate:**

1. Sample GM-38-GW-RW3-MW3-DUP-0319 (R1902053-003) was collected as field duplicate for sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All RPDs were ≤50.0%. No qualifications were required.

Field Sample	Compound	Analytical Method	Result	Units	Field Duplicate	Result	Units	RPD	Qualifier
GM-38-GW-RW3-MW3-0319	1,1,1-Trichloroethane	EPA 624	0.594	µg/l	GM-38-GW-RW3-MW3-DUP-0319	0.599	µg/l	0.8	None
GM-38-GW-RW3-MW3-0319	1,1-Dichloroethane	EPA 624	2.21	µg/l	GM-38-GW-RW3-MW3-DUP-0319	1.97	µg/l	11.5	None
GM-38-GW-RW3-MW3-0319	1,1-Dichloroethene	EPA 624	1.17	µg/l	GM-38-GW-RW3-MW3-DUP-0319	1.14	µg/l	2.6	None
GM-38-GW-RW3-MW3-0319	Chloroform	EPA 624	0.42	µg/l	GM-38-GW-RW3-MW3-DUP-0319	0.37	µg/l	12.7	None
GM-38-GW-RW3-MW3-0319	Cis-1,2-Dichloroethene	EPA 624	0.840	µg/l	GM-38-GW-RW3-MW3-DUP-0319	0.805	µg/l	4.3	None
GM-38-GW-RW3-MW3-0319	Trichloroethene	EPA 624	151	µg/l	GM-38-GW-RW3-MW3-DUP-0319	147	µg/l	2.7	None

**Matrix Spike (MS)/ Matrix Spike Duplicate (MSD):**

1. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All %RECs and RPDs were within the laboratory control limits. No qualifications were required.

**Compound Quantitation and Reported Contract Required Quantitation Limits (CRQLs):**

1. All results were within the linear calibration range. No qualifications were required.

**Target Compound Identification:**

1. All Relative Retention Times (RRTs) of the reported compounds were within  $\pm 0.06$  RRT units of the standard (opening CCV).
2. Sample compound spectra were compared against the laboratory standard spectra.
3. No QC deviations were observed.

**Comments:**

1. Validation qualifiers (if required) were entered into the EDD for SDG: R1902053.
2. Summary of the qualified data is listed in the Qualification Summary Table for SDG: R1902053 at the end of the data validation report.

**MERCURY**  
USEPA Region II – Data Validation

**Project Name:** Naval Weapons Industrial Reserve Plant, GM-38 Area-LTM  
**Location:** 100 Broadway, Bethpage, NY  
**SDG #:** R1902053  
**Client:** KOMAN Government Solutions, LLC  
**Date:** 04/24/2019  
**Laboratory:** ALS Environmental, Middletown, PA  
**Reviewer:** Sherri Pullar

**Summary:**

1. Data validation was performed on the data for nine (9) water samples and one (1) field blank analyzed for Mercury by EPA Method 245.1.
2. The samples were collected on 3/05 through 3/07/2019. The samples were submitted to ALS Environmental, Middletown, PA on 3/08/2019 for analysis.
3. The USEPA Region II SOP No. HW-2C, Revision 15, December 2012, Mercury and Cyanide Data Validation; USEPA National Functional Guidelines for Inorganic Data Review, EPA 540-R-2017-001, January 2017 and Quality Assurance Project Plan for GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, NY; September 3, 2009 were used in evaluating the Mercury data in this summary report.
4. In general, the data are valid as reported and may be used for decision making purposes. Selected data points were qualified due to nonconformance of certain Quality Control criteria (See discussion below).

**Samples:**

The samples included in this review are listed below:

Client Sample ID	Laboratory Sample ID	Collection Date	Matrix	Sample Status
GM-38-GW-RW3-MW4-0319	R1902053-001	3/05/2019	Water	
GM-38-GW-RW3-MW3-0319	R1902053-002	3/05/2019	Water	
GM-38-GW-RW3-MW3-DUP-0319	R1902053-003	3/05/2019	Water	Field Duplicate of sample GM-38-GW-RW3-MW3-0319
GM-38-GW-RW3-MW2-0319	R1902053-004	3/05/2019	Water	
GM-38-GW-RW3-MW1-0319	R1902053-005	3/05/2019	Water	
GM-38-GW-TP1-0319	R1902053-006	3/06/2019	Water	
GM-38-EB-0319	R1902053-007	3/06/2019	Water	Equipment Blank
GM-38-GW-RW1-MW1-0319	R1902053-010	3/07/2019	Water	
GM-38-GW-RW2-MW1-0319	R1902053-011	3/07/2019	Water	
GM-38-GW-RW1-MW3-0319	R1902053-012	3/07/2019	Water	

**Sample Conditions/Problems:**

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

**Holding Times:**

1. All water samples were digested and analyzed within the 28 days holding times for Mercury. No qualifications were required.

**Initial and Continuing Calibration Verification (ICV and CCV):**

1. The correlation coefficient for Mercury calibration curve analyzed was  $\geq 0.995$ . No qualifications were required.

- All ICVs and CCVs %REC values were within the QC limits (80-120%). No qualifications were required.

**Blanks (Method Blank, ICB and CCB):**

- All ICBs and CCBs were free of contamination. No qualifications were required.
- Method Blank digested on 3/12/2019 was free of contamination. No qualifications were required.

**Field Blank (FB) and Equipment Blank (EB):**

- Field Blank (GM-38-EB-0319) (R1902053-007) analyzed on 3/13/2019 was free of contamination. No qualifications were required.

**Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD):**

- Mercury %REC in Laboratory Control Sample (LCSW) analyzed on 03/13/2019 was within the laboratory control limits. No qualifications were required.

**Laboratory Duplicate:**

- Laboratory Duplicate was performed on sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All RPDs were within the laboratory control limits. No qualifications were required.

**Field Duplicate:**

- Sample GM-38-GW-RW3-MW3-DUP-0319 (R1902053-003) was collected as field duplicate for sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All RPDs were ≤50.0%. No qualifications were required.

Field Sample	Compound	Analytical Method	Result	Units	Field Duplicate	Result	Units	RPD	Qualifier
GM-38-GW-RW3-MW3-0319	Mercury	EPA 245.1	0.088	µg/l	GM-38-GW-RW3-MW3-DUP-0319	0.122	µg/l	32.4	None

**Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) and Duplicate/Laboratory Duplicate:**

- Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All %RECs and RPD were within the laboratory control limits. No qualifications were required.

**Compound Quantitation and Reported Detection Limits:**

1. All sample results were reported within the linear calibration range.

**Comments:**

1. Validation qualifiers (if required) were entered into the EDD for SDG: R1902053.
2. Summary of the qualified data is listed in the Qualification Summary Table for SDG: R1902053 at the end of the data validation report.

**GENERAL CHEMISTRY**  
USEPA Region II – Data Validation

**Project Name:** Naval Weapons Industrial Reserve Plant, GM-38 Area-LTM  
**Location:** 100 Broadway, Bethpage, NY  
**SDG #:** R1902053  
**Client:** KOMAN Government Solutions, LLC  
**Date:** 04/24/2019  
**Laboratory:** ALS Environmental, Middletown, PA  
**Reviewer:** Sherri Pullar

**Summary:**

1. Data validation was performed on the data for ten (10) water samples analyzed for Solids, Total Suspended (TSS) by SM2540D.
2. The samples were collected on 3/5 thru 3/7/2019. The samples were submitted to ALS Environmental, Middletown, PA on 3/8/2019 for analysis.
3. Quality Assurance Project Plan for GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, NY; September 3, 2009 was used in evaluating the Solids, Total Suspended data in this summary report.
4. In general, the data are valid as reported and may be used for decision making purposes. No data points were qualified due to nonconformance of Quality Control criteria (See discussion below).

**Samples:**

The samples included in this review are listed below:

<b>Client Sample ID</b>	<b>Laboratory Sample ID</b>	<b>Collection Date</b>	<b>Matrix</b>	<b>Sample Status</b>
GM-38-GW-RW3-MW4-0319	R1902053-001	3/05/2019	Water

**Sample Conditions/Problems:**

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

**Holding Times:**

1. All water samples were analyzed within the 7 days holding times for Solids, Total Suspended. No qualifications were required.

**Method Blank (MB), Storage Blank (SB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB):**

1. Method Blank (R1902053-MB) analyzed on 3/12/2019 was free of contamination. No qualifications were required.

- Equipment Blank (GM-38-EB-0319) (R1902053-007) analyzed on 3/18/2019 was free of contamination. No qualifications were required.

**Field Duplicate:**

- Sample GM-38-GW-RW3-MW3-DUP-0319 (R1902053-003) was collected as field duplicate for sample GM-38-GW-RW3-MW3-0319 (R1902053-002). RPD was >50.0%.

Field Sample	Compound	Analytical Method	Result	Units	Field Duplicate	Result	Units	RPD	Qualifier
GM-38-GW-RW3-MW3-0319	TSS	2540D	5.1	mg/l	GM-38-GW-RW3-MW3-DUP-0319	1.6	mg/l	104.5	J

**Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD):**

- Laboratory Control Sample (R1902053-LCS1) was analyzed on 03/12/2019. All %RECs were within the laboratory control limits. No qualifications were required.

**Laboratory Duplicate:**

- Sample Duplicate was performed on sample GM-38-GW-RW3-MW3-0319 (R1902053-002). All RPDs were within the laboratory control limits. No qualifications were required.

**Compound Quantitation and Reported Detection Limits:**

- All sample results were reported within the linear calibration range.

**Comments:**

- Validation qualifiers (if required) were entered into the EDD for SDG: R1902053.
- Summary of the qualified data is listed in the Qualification Summary Table for SDG: R1902053 at the end of the data validation report.
